Ahmad Zulhilmi Ghazali

SENIOR SOFTWARE ENGINEER - AIRASIA

+6013-830 5184

A.ZULHILMI92@GMAIL.COM

NO 11, JALAN GJ 1, TAMAN GOMBAK JAYA,
53100 KUALA LUMPUR

Skillsets

.NET Framework, ASP.NET, ASP.NET Core, ASP.NET Blazor, ASP.NET WebForms, MVC 5, MS SQL, C#, JavaScript, React.JS, Node.JS, CSS, HTML5, JQuery, Xamarin, Xamarin.Form, XAML, PHP, MySQL, IIS, REST API, Microsoft Azure, Visual Studio, Azure DevOps, GitLab. Amazon Web Services (AWS), Google Cloud Platform (GCP)

Working Experience

SENIOR SOFTWARE ENGINEER AT AIRASIA (FULL STACK)
SEPT 2022 - PRESENT
CLIENT : AIRLINES OPERATIONS AND PROCUREMENT DEPARTMENT

Development and Maintenance of AirAsia Aviation Fuel Sourcing (AFS)

AFS is a dynamic pricing engine that **forecasts fuel uplift costs of a flight. The engine incorporates real-time data on foreign exchange (FX) rates, Mean of Platts Singapore (MOPS) prices, and contractual pricing provided by the fuel supplier. The primary purpose of the engine is for the procurement team to make informed decision making and cost optimization for the fuel uplift.**

Key Responsibilities

- Led a team of 5 developers and 2 QA testers in the development and implementation of AFS.
- Coordinated and supervised the team's activities, ensuring efficient collaboration, timely delivery, and adherence to project milestones.
- Facilitated effective communication among team members, stakeholders, and management, ensuring alignment of objectives and smooth progress of the project.
- Oversaw the analysis and integration of foreign exchange (FX) rate data, Mean of Platts Singapore (MOPS) prices, and contractual pricing information into the pricing engine.
- Conducted regular team meetings to discuss progress, address issues, and foster a collaborative and motivating work environment.
- Regularly reported project updates, milestones, and risks to senior management, facilitating transparency and informed decision-making.

Technologies/Programming Languages

GCP, GCP Cloud Run, GCP Firestore, GCP KMS, GCP IAM, GCP Cloud Scheduler, GitLab, React.js, Node.js, Postman

Enhancement & Maintenance of ACE (AirAsia Centralised Engine)

ACE is a middleware that manages booking and fare services which are used mainly by the Online Travel Agents (OTA). ACE also controls and validates users' data that are being sent and saved into the AirAsia database.

Key Responsibilities

- Collaborated with a team of developers and system administrators to enhance and maintain the ACE system, ensuring its reliability, efficiency, and scalability.
- Conducted thorough analysis of business requirements, identified areas for improvement, and proposed solutions to enhance system functionality and performance.
- Led the planning and execution of system upgrades, patches, and bug fixes, ensuring minimal disruption to operations and maintaining high system availability.
- Monitored system performance and proactively addressed any anomalies or performance degradation, ensuring optimal system performance at all times.
- Documented system enhancements, changes, and maintenance activities to maintain an updated repository of system knowledge and facilitate seamless knowledge transfer.
- Acted as a key point of contact for system-related issues, effectively communicating with stakeholders and providing timely resolution to ensure uninterrupted operations.

Technologies/Programming Languages

GCP, GCP App Engine, GCP Firestore, GCP KMS, GCP BigQuery, GCP IAM, GCP Cloud Scheduler, GitLab, .NET Core, SoapUI, Postman

SENIOR ANALYST AT AVANADE MALAYSIA (FULL STACK)
SEPT 2021 - AUG 2022 (1 YEAR)
CLIENT : TENAGA NASIONAL BERHAD (TNB)

Development and Maintenance of myTNBiz Portal

myTNBiz is web portal system to manage, view and pay the bills catered for the business organisations in Malaysia. The system provides visibility to the clients on their electricity usage across all of their electricity accounts and allow payments through the portal by various payment method ranging from FPX, EFT and Cheque payment.

Key Responsibilities

- Involved in code writing, unit testing and system documentation as well as debugging of codes
- Liaise with various teams : design, functional, testing, BCRM team to agree on project objectives and specification requirements.
- Work closely with project managers and other members of development team to ensure timely completion of deliverables.
- Creation and Management of Code Pipelines as part of the continuous integration and continuous delivery (CI/CD) in AWS Console.
- Worked on daily improvements and bug fixing of the deployed services.
- In charge of code writing and debugging of the FPX Payment method implementation.
- Liaise with the TNB FPX Team, Payment Gateway and Gateway Bank to ensure smooth implementation of the FPX payment method.
- Worked on the other payment mechanisms on the Portal which includes EFT and Cheque.

Technologies/Programming Languages

AWS, AWS ECS, AWS Code Commit, AWS lambda, AWS Pipelines, AWS CloudWatch, AWS Batch, AWS User and Roles Management, AWS Systems Management, .NET Core, SNS, SQS, Git, MSSQL, Swagger, Postman

DEVELOPER AT EXPRO GROUP MALAYSIA (FULL STACK)
APRIL 2018 - AUG 2021 (3.5 YEARS)
CLIENTS : APACHE CORP. , TULLOW OIL, TAQA, CONOCOPHILLIPS

Development & Maintenance of SafeWells Systems

SafeWells is a web-based system to provide visibility to the clients of their wells integrity status across their entire business. Data such as well tests, compliance, maintenance details, well pressure details, et cetera will be logged into the system. The system would provide the clients with an overview of their wells health and will notify them when their wells are due for maintenance. The system also provides an intensive report of the wells' status to the clients.

Key Responsibilities

- Involved in code rewriting, unit testing and system documentation as well as debugging of codes to improve the performance of the system
- Involved in the redesigning (UI & UX) and development of the system.

Technologies/Programming Languages

Azure DevOps, Visual Studio, SQL Server Management Studio (SSMS), Internet Information Services (IIS), .NET Web Forms Framework

Development & Maintenance of SafeWells Offline Forms System

Offline Forms Manager is the extension module for SafeWells system. It brings offline capabilities to the field engineers to seamlessly record and integrate data into the SafeWells system. The system will be available offline for the field engineers and would sync the data online whenever internet connection is established.

Key Responsibilities

- Involved in code writing, unit testing and system documentation as well as debugging of codes
- Involved in the designing and development of the system.
- In charge of back-end querying and stored procedure creation for system development.
- Handled tickets for enhancements or bug fixes for Offline Forms system running on ASP.NET Blazor and delivering them as scheduled.

Technologies/Programming Languages

Azure DevOps, Visual Studio, SQL Server Management Studio (SSMS), Internet Information Services (IIS), .NET Blazor Framework

INTERNSHIP AT PETRONAS ICT SDN. BHD.
BUSINESS FUNCTION FINANCE-TREASURY
MAY 2016 - DECEMBER 2016 (8 MONTHS)

Development & Maintenance of the PETRONAS IFSSC Payment Advice Portal
Sorting of payment advice according to Operating Unit (OPU) Code. Allows for OPUs to access (View & Download) Payment Advice through search function. Allows Group Treasury Department of PETRONAS to moderate the viewing access of Payment Advice depending on their access levels.

Automate the manual process of sorting and distribution of the payment advice and thus reducing the effort required to complete the task. (Reduction from 4 hours of manual work to 5 minutes)

Technologies/Programming Languages
XAMPP, PHP, MySQL
